DESCRIPTORS: *Silicon, Enthalpy, Specific heat,
Measurement.

The present article gives the results of measurements
of the enthalpy of silicon of the highest purity, over the
temperature interval 1148-1915°K, in the solid and
liquid phases, along with the temperature and the heat
of the phase transition. The experimental data obtained
in the work are used to find the coefficients of the
interpolation for the enthalpy, and the specific heat
capacity of silicon in the solid and liquid phases.
